

# TURNING

- Turning Tools
- Milling Tools
- Heavy Duty Processing
- Parting and Grooving
- Cermet Inserts
- Boring Tools

## Introduction

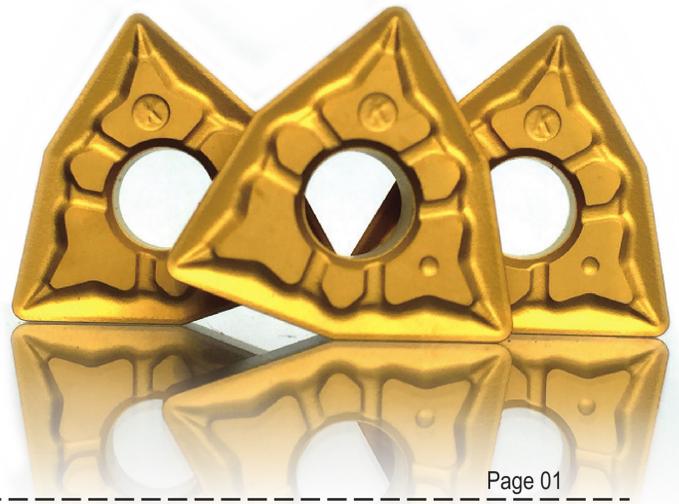

This Master Catalogue is your best source for a broad range of advanced indexable machining solutions. These "best in class" products include...

- A complete range of PVD and CVD first choice grades that includes the advantage of Mega range of Turning/Milling/Grooving/Threading/Drilling etc, with State of the Art Technology.
- Geometries that also offer a "first choice" range from finishing to roughing to meet the increasing demands of higher feed rates for greater chip control,
- Application and customer service support from our technical sales engineer is our main motto.

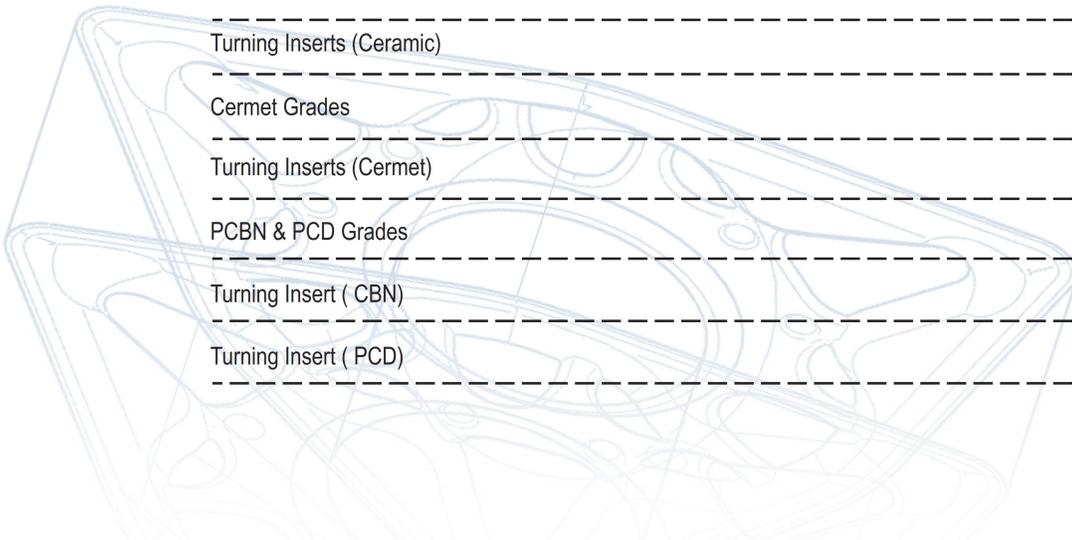

Rely on Duratec to achieve "Best in Class" machining solutions for your high end performance with satisfying results.

## SAFETY GUIDELINES

DURATEC is continuously trying to develop safer and higher quality products  
Please be aware of the safety guidelines below prior to using DURATEC products

- It is generally accepted that the proper handling of cemented carbide tools requires awareness of safety as noted above. For more information, please contact us.
- DURATEC does not accept any responsibility for any accident caused by inappropriate use, abuse of tools, or changes to the products.

### PL (Product Liability)

In accordance with the PL (Product Liability) law, we have attached a WARNING label on the case of Duratec products. There is no warning on the surface of the tools. Please read this safety guidelines before using carbide tools and provide safety education to all users.

### Basic characteristics of CEMENTED CARBIDE tools

Cemented carbide tools are made of carbides, nitrides, carbonitrides, oxides of W, Ti, Al, Si, Ta, B etc and metal component like Co, Ni, Cr, Mo as binder. Cemented carbides tools have high hardness and specific gravity. Generally there's no smell but according to usage and treatment, appearance and color could be changed

### Precaution for CEMENTED CARBIDE tools

- 1) Cemented carbides are extremely hard and brittle at the same time.  
Impact shock or excessive clamping power could cause fracture or breaking of the tool.
- 2) Cemented carbides have large specific gravity, thus they require special attention as a heavy material when you handle big sizes or large quantities.
- 3) Cemented carbides have different thermal expansion coefficient with steel and ferrous materials. Shrink fit or swell fit products may cause trouble if they are used at undesirable conditions like extremely high or low temperatures.
- 4) There are several cemented carbide products having sharp cutting edges.  
Be careful not to handle the tools with bare hands which may cause cuts or injury, especially when removing the tools from the case, do not touch the cutting edge and be careful not to drop it.
- 5) Storing carbide tools in a corrosive atmosphere may cause erosion which can reduce toughness.
- 6) Please refer to the catalogue safety guidance prior to handling the tools.
- 7) Do not abuse tools under inappropriate conditions.

### Precaution for machining (grinding, welding, EDM) of CEMENTED CARBIDE tools

- 1) Surface condition can affect the toughness of the tool, so it is recommended to use a diamond grinding wheel.
- 2) Grinding of cemented carbide creates mist and dust. It contains harmful compositions like Co, thus it is recommended to use a mask, mist collection, and other protective facilities. If the dust gets in your skin or eye, rinse immediately with continuously running water.
- 3) In case of grinding with coolant, coolant contains harmful metal components which cause environmental problems. Handle the coolant according to the manufacturer's recommendations.
- 4) Check for cracks after re-grinding carbide tool and reuse.
- 5) Marking with laser or electric pen may cause cracks on the carbide tool. The crack can shorten tool life.
- 6) EDM of carbide may cause residual cracks on the carbide tool, so if necessary, remove the crack with a grinding process.
- 7) Brazing of carbide tools at extremely high or low temperatures compare with the melting point of brazing materials may cause loosening or breakage.
- 8) Overheating an oil base coolant may cause a fire or flames, thus be prepared for fire prevention.

# CVD Coated cemented carbide

DCP9120

- Surface gold TiN has the excellency of reducing the friction and wear recognition effect.
- Special structure of Al<sub>2</sub>O<sub>3</sub> settled layer has the best thermal barrier performance, high speed dry cutting, ensure resistance to plastic deformation of blade matrix at high speed dry cutting.
- TiCN layer with anti-wear material abrasion performance lead to the best wear resistant of the face of clearance angle.
- Using gradient sintering technology, and increase the impact resistance and wear resistance of insert, so as to improve the ability to resist damage of the insert.
- Carbide with special crystal structure improves the red hardness of the blade matrix, and strengthened the high temperature resistant performance of insert.

## DCP9115

High wear-resistant substrates combine with MT-TiCN, thick Al<sub>2</sub>O<sub>3</sub>, TiN coatings, excellent grades of steel, cast steel & stainless steel materials' finish processing at high speed cutting conditions.

## DCP9120

Special strength & toughness of the blade's substrates, perfect combinations with MT-TiCN, thick Al<sub>2</sub>O<sub>3</sub> coating, common grades for steel, suitable for steel, cast steel & stainless steel in semi-finishing, finishing.

## DCP9135

High-strength resistance & antiplastic deformation substrates, combining with MT-TiCN, thick Al<sub>2</sub>O<sub>3</sub> coating, good toughness & antiplastic deformation, suitable for steel, cast steel & stainless steel in light-roughing & roughing.

## DCP9330

High hardness substrates, medium and high speed, suitable for light & heavy milling of low alloy steel & unalloyed steel, also suitable for milling at low condition.

## DCP9340

Wear-resistant & good toughness substrates, common coating cemented carbide grades, used for medium and low speed milling of steel, cast iron, hardened steel.

## DCP9235

High-strength resistance & antiplastic deformation substrates, combining with MT-TiCN, ultra fine Al<sub>2</sub>O<sub>3</sub>, TiN coatings, good toughness & anti-plastic deformation, suitable for steel, cast steel & stainless steel in light-roughing & roughing.

## DCP9225

The combination of high wear-resistant substrate with MT-TiCN, fine grained Al<sub>2</sub>O<sub>3</sub> and TiN coatings, is a ideal grade of finishing processing of steel, stainless steel and cast iron in the case of high speed cutting.

## DCP9325

With optimized toughness and hardness substrate and MT-TiCN, fine grained Al<sub>2</sub>O<sub>3</sub> and TiN coatings, as a general using grade in ISO P25 application area, is suitable for semi-finishing and finishing processing of steel, stainless steel and cast iron.

## DCP9335

Substrate with high strength and strong resistance to plastic deformation combined with MT-TiCN, fine grained Al<sub>2</sub>O<sub>3</sub> and TiN coatings, having great toughness, is suitable for light load roughing of steel, stainless steel and cast iron.

## DCP9215

High wear resistant substrates combine with MT-TiCN, thick Al<sub>2</sub>O<sub>3</sub>, TiN coatings, excellent grades of steel, cast steel & stainless steel materials' finish processing at high-speed cutting conditions.

## DCP9225

Special strength & toughness of the insert substrates, perfect combinations with MT-TiCN, ultra fine Al<sub>2</sub>O<sub>3</sub>, TiN coatings, common grades for steel, suitable for steel, cast steel & stainless steel in semi-finishing, finishing.

**CVD Coated cemented carbide**

**DCK5205**

Coatings & tough substrates combination, supporting high-temperature & unelastic-deformation, suitable for ductile cast iron, forged cast-iron with high strength, ferrosteel in finishing & semi-finishing.

**DCK5215**

High wear-resistant substrates, perfect combinations with MTTi(CN), thick Al<sub>2</sub>O<sub>3</sub> coating, initial grades for ductile cast iron, forged cast iron, highly cutting speed allowance.

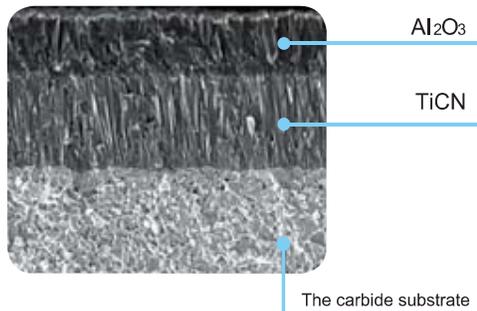

**DCK5315**

Wear-resistant & good toughness substrates, perfect combinations with MT-Ti(CN), thick Al<sub>2</sub>O<sub>3</sub> coating, initial grades for ductile cast iron & forged cast iron in roughing & highly-metal.

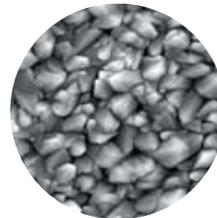

*Higher cutting speed and longer life of insert*

The inserts with special surface technology, greatly improved the surface roughness, effectively reduce the cutting force, reduce the adhesive between the cutter surface and the processed material, greatly improve the stability of inserts to use.

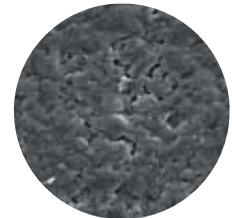

Fibrous TiCN and the perfect combination of fine grain Al<sub>2</sub>O<sub>3</sub> coating significantly improved the wear resistance and resistance to collapse of insert.

*The second generation of steel processing*

Before the surface treatment

After the surface treatment

**Contrast effect of insert abrasion test**

Workpiece(42CrMo Type:CNMG120408-GS  
Cutting parameter:Vc=390m/min ap=1mm fn=0.2mm/r

Grade of company

DCP9215

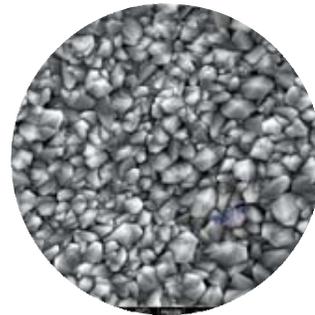

# Black general insert

First choice for high-speed and efficient processing of cast iron

- Thick  $Al_2O_3$  coating combined with strong impact resistance matrix, the insert has the stable high temperature red hardness and good impact resistance, improves the wear resistance of the insert under the requirement of high speed, high feed machining cast iron.
- All black product color shows more high-end

## Remarkable result

- Improve the production efficiency, coating and substrate are all adapted to cast iron of high speed and high feed cutting. **Cutting speed can be increased by 30% - 40%.**
- Reduce the cost, **improve the tool life of nearly 40% to 50%.**
- High stability of processing

Density fine grain layer of surface

### DCK5315

High wear-resistant substrates, perfect combinations with MTTi (CN), ultra  $Al_2O_3$ , TiN coatings, initial grades for ductile cast iron, forged cast iron, highly cutting speed allowance

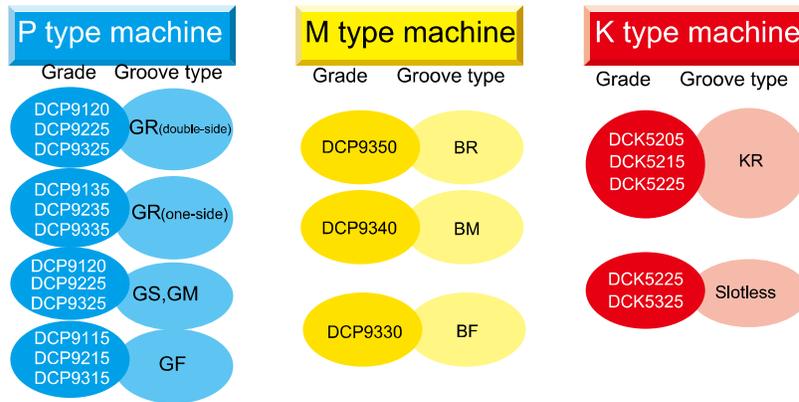

### DCK5325

Wear-resistant & good toughness substrates, perfect combinations with MT-Ti(CN), ultra  $Al_2O_3$ , TiN coatings, initial grades for ductile cast iron & forged cast iron in roughing & highly-metal.

# PVD coated cemented carbide

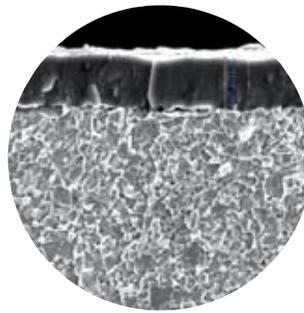

- *Let the difficult machining materials gets easy*
- *New grade of nano coated*

Special coating process lead to smooth surface, low cutting resistance force and easy chip-flow

Unique nano structure coating, closer integration with the substrate, towards higher toughness and hardness.

Good thermal stability and chemical stability of cutting edges provide more effective protection.

High performance TiAlN coated of nano structure ensures that the insert has a very high toughness and hardness. Unique coating technology makes the insert with smooth surface and high wear resistance, excellent thermal stability and chemical stability provide effective protection of cutting edge

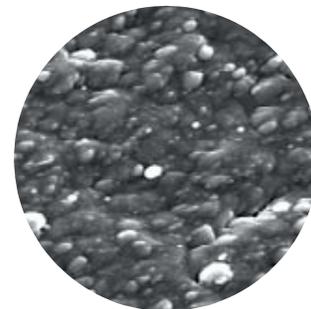

nc-TiAlN Coating DPM8125

## DPM8125

2-4 $\mu$ m TiAlN PVD coated, combining with ultra fine particles' substrates with high-toughness, suitable for all materials, stainless steel & high-temperature alloy in finishing, semi-finishing.

## DPM8115

2-4 $\mu$ m TiAlN PVD coated, combining with fine particles' substrates with high-toughness, suitable for all materials, high-temperature alloy & Ti alloy in finishing, semi-finishing.

The coating surface of DPM8125

## DPM8225

2-4 $\mu$ m AlCrN+AlCrSiN PVD coated, combining with ultra fine particles' substrates with high-toughness, suitable for all materials in light & medium load milling, stainless steel & high-temperature high hardness alloy in finishing, semi-finishing.

## DPM8135

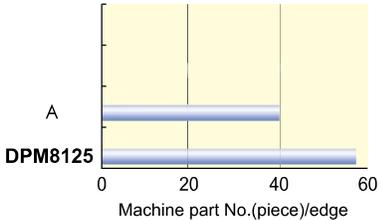

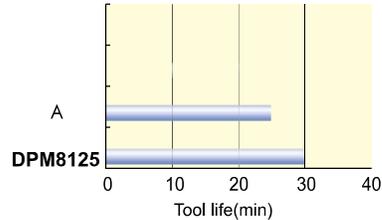

PVD coated, combining with high-resistant substrates, suitable for all materials in roughing, semi-finishing.

# CERAMIC

## ➤ Ceramic Grades

### Silicon Nitride; Titanium Nitride

- Excellent wear resistance and good impact resistance
- Excellent heat resistance, high oxidation resistance and high thermal shock resistance, so the cutting speed can generally be higher than carbide cutting tool 3 - 10 times, can realize high speed cutting and dry cutting to substantially improve production efficiency and reduce the cost production.

## ➤ The Features of Ceramic grades

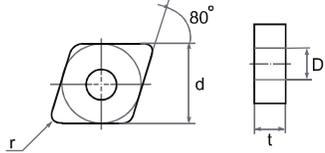

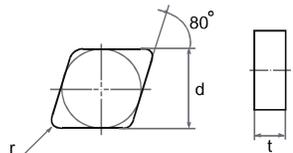

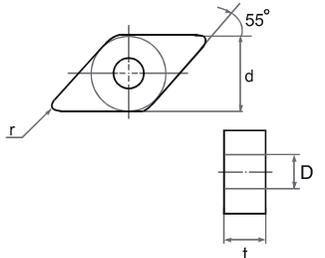

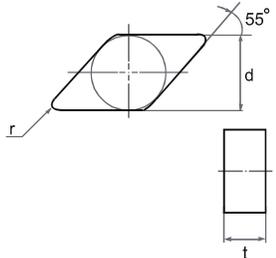

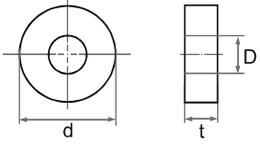

Grades	Recommend for application	Material Type	g/cm <sup>3</sup>	HRA	Mpa	Mpam <sup>1/2</sup>
<b>DS01</b>	High temperature resistance performance is good, suitable for large feed processing and milling of high hardness cast iron, ductile cast iron, hardened steel and nickel based alloy	Silicon Nitride	3.40	91-93	800-1000	7-10
<b>DS03</b>			3.85	92-94	800-1000	7-10
<b>DT01</b>	Good wear resistance, can be realized by turning on behalf of grinding or milling on behalf of grinding. Suitable for HRC<65 hardened steel and alloy cast iron medium to finishing	Titanium Nitride	4.77	93-94.5	750-950	6-8
<b>DT03</b>			4.85	93-95	700-900	6-8

## ➤ The Features of Ceramic grades

Work Pieces	Machining Type	Insert Grade	Cutting Speed Vc (m/min)	Feed (mm/rev)	Cutting Depth (mm)

## ➤ Cermet Grades

**For Steel, stainless steel, cast iron, other sintering alloy steel**  
**Continous cutting cermet.**

### **DTIM20 DTIM30**

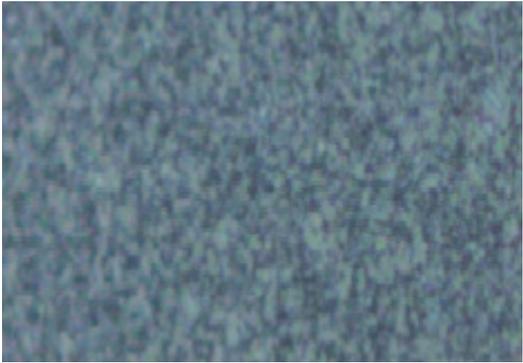

- Functionally gradient cermet materialization leads excellent quality on both non-grinding and grinding inserts.
- Due to increase of plastic deformation resistance, it maintains superior wear resistance and precision on workpiece dimensions over long period usage with wet and dry cutting conditions machining
- Improved adhesion wear resistance on upper part and cutting edge, reduces tool cutting load and makes surface finishing smooth after machining.

- New vermet grade for finishing of cast iron, carbon steel, alloy steel, stainless steel and other sintered

**K05-K10 P05-P25 M05-M15**

## ➤ DTIM20 Grade

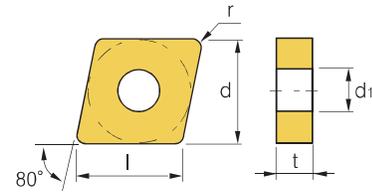

Recommended cutting speed (m/min)	ISO	K05-K10 P05-P25 M05-M15
	Density (g/cm <sup>3</sup> )	6.1-7.2
	Hardness (HRA)	>92
	Bending strength (N/mm <sup>2</sup> )	>1800
210 (120-300)	Application	Suitable for the finishing to semi-finishing of stainless steel and steel

## DTIM30 Grade

Recommended cutting speed (m/min)	ISO	K05-K10 P05-P25 M05-M15
	Density (g/cm <sup>3</sup> )	6.5-7.2
	Hardness (HRA)	>92
	Bending strength (N/mm <sup>2</sup> )	>1900
280 (150-400)	Application	Suitable for the semi-finishing to roughing of stainless steel and steel
